

ENERGY AND WASTE MANAGEMENT BUREAU

SWAP Targeted Waste Streams

- Effective as of April 2007 funding round –

Note: Targeted Waste Streams are in no particular order

1. Process or Supply Waste Reduction

Examples:

- A production change that decreases the amount of waste generated
- Supply change to allow production inputs / raw materials to be shipped / received in reusable containers.

2. Fiber Projects – New Diversion projects only

Examples:

- New / revised collection program results in new / increased diversion of fiber materials
- Projects initiating / expanding fiber recycling within an Industrial / Commercial / Institutional facility
- Increasing diversion capacity through:
 - Equipment upgrades
 - Building expansion if needed for increased diversion
 - Buildings for storage of diverted materials / finished product will not be considered a targeted waste stream project

3. Plastics Projects – New Diversion projects only

Examples:

- New / revised collection program results in new / increased diversion of plastic materials
- Projects initiating / expanding plastics recycling within an Industrial / Commercial / Institutional facility
- Increased diversion capacity through:
 - Equipment upgrades
 - Building expansion if needed for increased diversion
 - Buildings for storage of diverted materials / finished product will not be considered a targeted waste stream project

4. Organic Waste – Industrial / Commercial / Institutional facility projects only

Examples:

- Restaurant food waste projects
- Food processor waste projects
- Non-yard waste projects
 - Yard waste projects will not be considered a targeted waste stream project

5. Construction and Demolition (C&D) waste

Eligible materials in order of preference

- Wood (non-yard waste materials)
- Drywall
- Shingles
- Carpet
